

Step-by-step covering guide for

Hardcover

Premium Self Adhesive Rigid Sheet Book Covering

An economical and easily applied cover that adds strength, firmness, and protection to all soft cover resources.

- STEP 1. Select two sheets of Hardcover and remove the backing paper. Position in 5mm from the spine or fold-back crease. Roll onto the front cover, smoothing down the film as you go.

- STEP 2. Trim the excess Hardcover with scissors or a blade. Repeat steps 1 and 2 on the back cover.

- STEP 3. Select a suitable width Clear Spine Tape (enough to cover the spine and overlap each edge of the film by at least 15mm). Apply to the front cover and wrap around the spine to join the back cover.

- STEP 4. Smooth down the Clear Spine Tape and trim off any excess at the top and bottom.

Note—it is also recommended that the hinges be strengthened with White or Clear Hinge Tape or Filament

Covering with Hardcover160 or HardCover250 is the same process as described above, however, for Hardcover160 you must first cut the required two sheets from the roll.
